

Network Access Control and Wireless

Lennart Franked

Avdelningen för informations- och kommunikationssystem (IKS),
Mittuniversitetet, Sundsvall.

October 30, 2014

1 Network Access Control (NAC) and IEEE 802.1X

- Network Access Control
- Extensible Authentication Protocol
- IEEE 802.1x

2 Wireless Network Security

- Wireless Security

3 802.11 Wireless Overview

- 802.11 - Wireless LAN
- Wireless LAN Security

The lecture covers chapter 5.1 - 5.3 and chapter 7 “Wireless Network Security” in [1]. To check that you have fully understood these chapters, you should solve problems 7.1, and 7.2

Network Access Control

Figure 5.1 Network Access Control Context

Figure 5.1 Network Access Control Context

Access Requestor

- Access Requestor, Client, Supplicants, peer
- Access the network.

Figure : [1].

Policy Server

Network Access Control

Figure 5.1 Network Access Control Context

Policy Server

- Enforce access restrictions.

Figure : [1].

Network Access Server

Network Access Control

Figure 5.1 Network Access Control Context

Network Access Server

- Control access to Network.

Figure : [1].

Network Access Enforcement Methods

Network Access Control

- IEEE 802.1X - EAP over LAN.
- VLAN.
- Firewall.
- DHCP management.

Network Access Enforcement Methods

Network Access Control

- IEEE 802.1X - EAP over LAN.
- **VLAN.**
- Firewall.
- DHCP management.

Network Access Enforcement Methods

Network Access Control

- IEEE 802.1X - EAP over LAN.
- VLAN.
- **Firewall.**
- DHCP management.

Network Access Enforcement Methods

Network Access Control

- IEEE 802.1X - EAP over LAN.
- VLAN.
- Firewall.
- DHCP management.

Figure 5.2 EAP Layered Context

- *Framework* for network access and authentication protocols.
- Mostly encountered in wireless networks and PPP-connections.
- Extension to PPP

Figure : [1].

Extensible Authentication Protocol

Figure 5.2 EAP Layered Context

- *Framework* for network access and authentication protocols.
- Mostly encountered in wireless networks and PPP-connections.
- Extension to PPP

Figure : [1].

Extensible Authentication Protocol

Figure 5.2 EAP Layered Context

- *Framework* for network access and authentication protocols.
- Mostly encountered in wireless networks and PPP-connections.
- Extension to PPP

Figure : [1].

Authentication Methods

Extensible Authentication Protocol

Figure 5.2 EAP Layered Context

EAP authentication methods.

- EAP-TLS.
- EAP-TTLS.
- EAP-PSK.
- EAP-IKEv2.

Figure : [1].

Authentication Methods

Extensible Authentication Protocol

Figure 5.2 EAP Layered Context

EAP authentication methods.

- EAP-TLS.
- EAP-TTLS.
- EAP-GPSK.
- EAP-IKEv2.

Figure : [1].

Authentication Methods

Extensible Authentication Protocol

Figure 5.2 EAP Layered Context

EAP authentication methods.

- EAP-TLS.
- EAP-TTLS.
- EAP-PSK.
- EAP-IKEv2.

Figure : [1].

Authentication Methods

Extensible Authentication Protocol

Figure 5.2 EAP Layered Context

EAP authentication methods.

- EAP-TLS.
- EAP-TTLS.
- EAP-GPSK.
- EAP-IKEv2.

Figure : [1].

EAP Exchanges

Extensible Authentication Protocol

Figure : EAP Protocol Exchange [1]

EAP Messages

Extensible Authentication Protocol

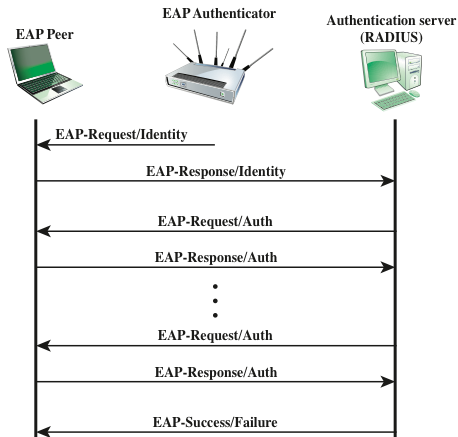

Figure : EAP Message Flow [1]

Figure : IEEE 802.1x operation [1]

- EAPOL-EAP – Encapsulated EAP packet.
- EAPOL-Start – Initiates the start of EAP authentication process.
- EAPOL-Logoff – Closes the EAP session.
- EAPOL-Key – Exchange key information.

- EAPOL-EAP – Encapsulated EAP packet.
- **EAPOL-Start** – Initiates the start of EAP authentication process.
- EAPOL-Logoff – Closes the EAP session.
- EAPOL-Key – Exchange key information.

- EAPOL-EAP – Encapsulated EAP packet.
- EAPOL-Start – Initiates the start of EAP authentication process.
- **EAPOL-Logoff** – Closes the EAP session.
- EAPOL-Key – Exchange key information.

- IEEE 802.1x

2 Wireless Network Security

- Wireless Security

3 802.11 Wireless Overview

- 802.11 - Wireless LAN
- Wireless LAN Security

Wireless Network Security

Why wireless network are more susceptible to attacks.

- Broadcast communication allows eavesdropping.
- Jamming traffic
- Mobile devices
- Implemented on a variety of devices with limited memory and computational resources.
- Easy to access.

Figure : 802.11 Architectural Model [1]

Wireless LAN

Any station within the range of a wireless AP can transmit and receive data on the LAN.

Wired LAN

Only devices with a physical connection to the network can send and receive data on the LAN.

Wireless LAN

Any station within the range of a wireless AP can transmit and receive data on the LAN.

Wired LAN

Only devices with a physical connection to the network can send and receive data on the LAN.

- Wired Equivalent Privacy (WEP)
- Wi-Fi Protected Access (WPA)

- Wired Equivalent Privacy (WEP)
- Wi-Fi Protected Access (WPA)

- Use RC4 stream cipher.
- 128 bit random number used as a challenge.
- 64 bit (40 bit user generated) or 128 bit (104 bit user generated) key sizes.
- 24 bit initialization vector

- Use RC4 stream cipher.
- 128 bit random number used as a challenge.
- 64 bit (40 bit user generated) or 128 bit (104 bit user generated) key sizes.
- 24 bit initialization vector

(a) Services and Protocols

(b) Cryptographic Algorithms

- CBC-MAC = Cipher Block Block Chaining Message Authentication Code (MAC)
- CCM = Counter Mode with Cipher Block Chaining Message Authentication Code
- CCMP = Counter Mode with Cipher Block Chaining MAC Protocol
- TKIP = Temporal Key Integrity Protocol

Figure : Elements of 802.11i [1]

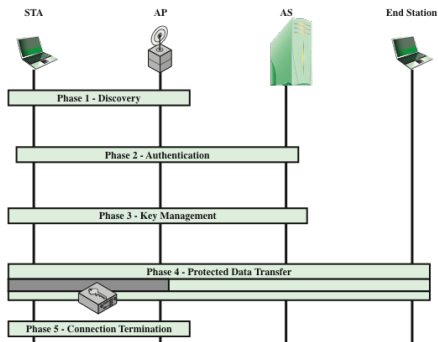

Figure : 802.11i Phases of operation [1]

802.11i - Discovery/Authentication phase

Wireless LAN Security

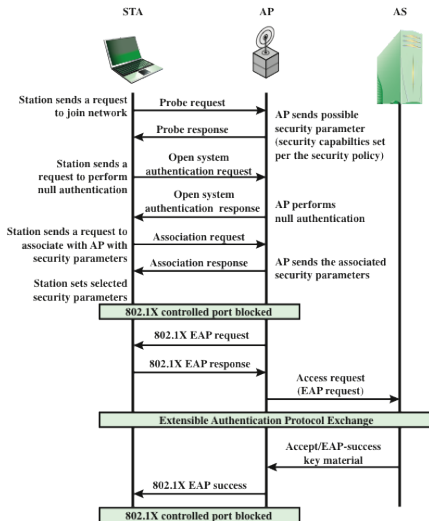

Figure : Discovery, authentication and association [1]

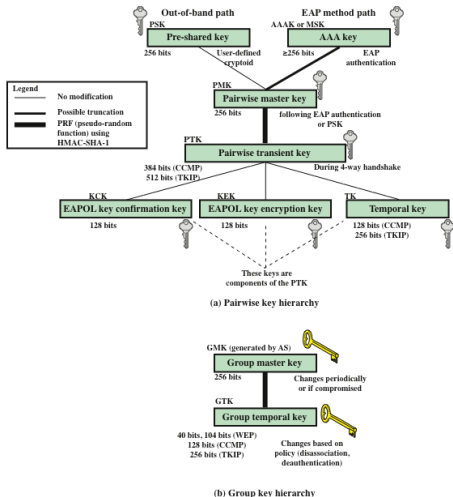

Figure : Key Hierarchies [1]

- Pairwise Keys
 - ▶ Used for communication between a pair of devices.
- Pre-Shared Key
 - ▶ A secret key installed outside the scope of 802.11i
- Master Session Key
 - ▶ Master key generated using IEEE 802.1x EAPOL
- Pairwise Master Key
 - ▶ Derived from MSK or PSK
- Pairwise Transient Key
 - ▶ Consists of three keys:
 - ▶ Key Confirmation Key (KCK)
 - ▶ Key Encryption Key (KEK)
 - ▶ Temporal Key (TK)

- Used for multicast communication
- Two keys are used
 - ▶ Group Master Key - Used to generate Group Temporal Key
 - ▶ Group Temporal Key - Used to encrypt the MPDUs
 - ▶ Changed every time a device leaves the group.

IEEE 802.11i Four-way Handshake

Wireless LAN Security

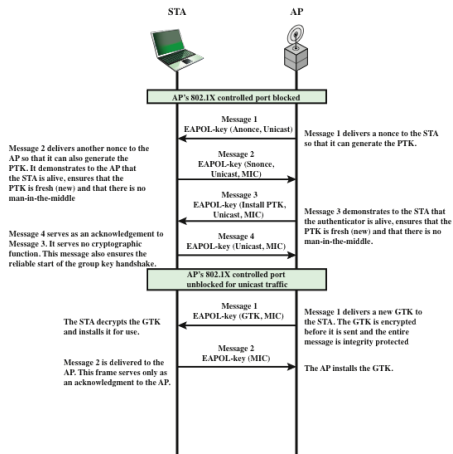

Figure : Four-way handshake and Group Key Handshake [1]

- TKIP (Temporal Key Integrity Protocol)
 - ▶ Software backward compatible with WEP devices
 - ▶ Message integrity using a MAC (Michael)
 - ▶ Encrypts data using RC4.
- CCMP (Counter Mode-CBC MAC Protocol)
 - ▶ Use CBC-MAC for message integrity
 - ▶ Encrypts data using AES-CTR.

- Used for amongst other things generating nonces.
- Built on the HMAC-SHA1 hash algorithm.

Figure 7.11 IEEE 802.11i Pseudorandom Function
